

How to Match NRT Data

- 1) Enter provided API credentials. Then press *Validate*.

The screenshot shows the Swiftium logo at the top. Below it, the heading "API Credentials" is displayed. There are two input fields: "API Key" and "API ID". To the right of these fields is a green button labeled "Validate Credentials" with the text "Validate" inside it.

- 2) Enter captured attendee data in the format specified in the form. (Not displayed in image)

The screenshot shows the Swiftium logo at the top. Below it, a green checkmark icon is followed by the text "Successfully Validated API Credentials".

Upload/Enter Barcode Data

Choose Barcode Data File

 No file chosen

Text files only. One barcode per line. Max: 2500 barcodes

Enter Attendee Data

```
321|Hello|World
444|Test|Good
```

One barcode per line. Max: 2500 barcodes.

- 3) Then press *Submit*. Any information found about the captured attendee data will be indicated by a counter. Note the attendee information is a look up table of information.

 Successfully Validated API Credentials
