

Swiftium Mobile Event App

This feature can be accessed through Swiftium.co on your mobile device by selecting *Event Overview Mobile App* from the dropdown menu.

<https://swiftium.co/Reporting/Wizards/WebApp/>

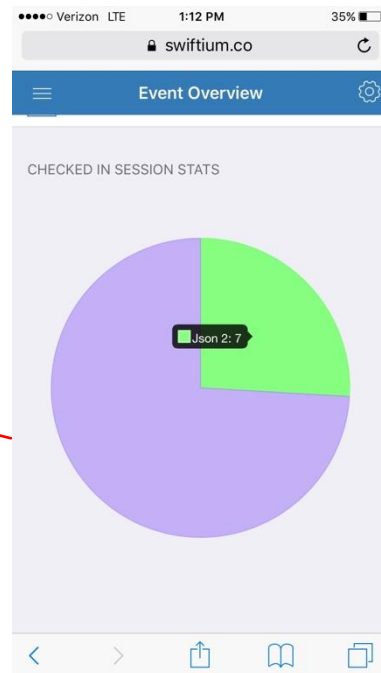

The Event Overview app is a convenient way for event staff to monitor session tracking onsite by displaying check-ins and participation stats for the event.

After logging in to the mobile app, the user will choose an event from a list of all available events.

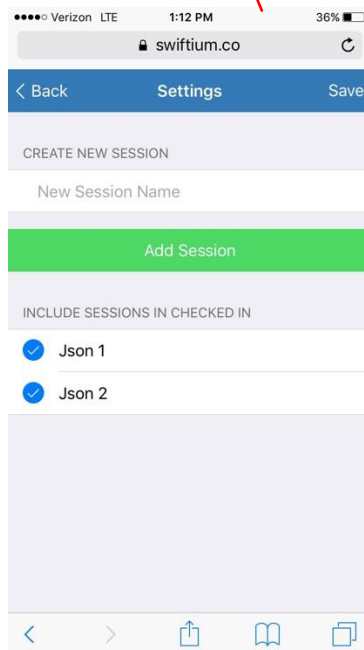

This app features a Checked in/Registered bar as well as a chart displaying the current ratio of checked in session stats.

Event staff can access a list of the attendee names checked in and registered to the event.

Event staff can select any session in the event to access stats on daily and hourly scans into the session.

Event staff can enter into settings to add sessions and/or select which sessions to include on the main page display. (Settings -> click on cog icon located in top right corner of main page)
